# Sorption Isotherms

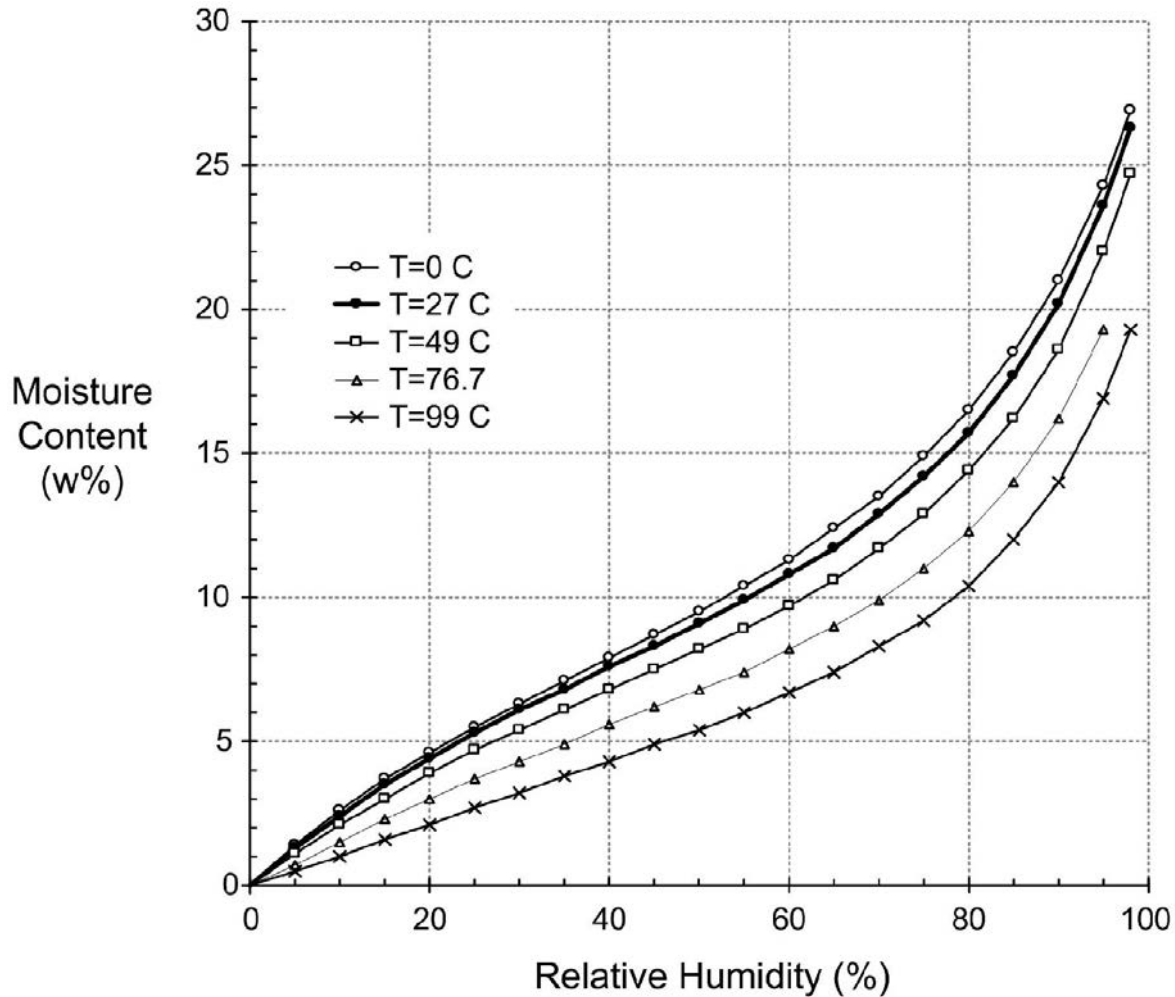

Change in the storage of moisture in a porous building material as the partial pressure of water vapor in the ambient air increases from zero to full saturation value at a given temperature.

### Sorption Curve

From M.K. Kumaran, ASTM MNL 18-2nd Edition,  
Moisture Control in Buildings, 2009

Average sorption isotherm for wood as a function of temperature  
 From Straube & Burnett, 2005

# Moisture Content vs. Relative Humidity

# 2<sup>nd</sup> Law of Thermodynamics

Heat Flow Is From Warm To Cold

Moisture Flow Is From Warm To Cold

Moisture Flow Is From More To Less

Air Flow Is From A Higher Pressure to a  
Lower Pressure

Gravity Acts Down

**Exposure**

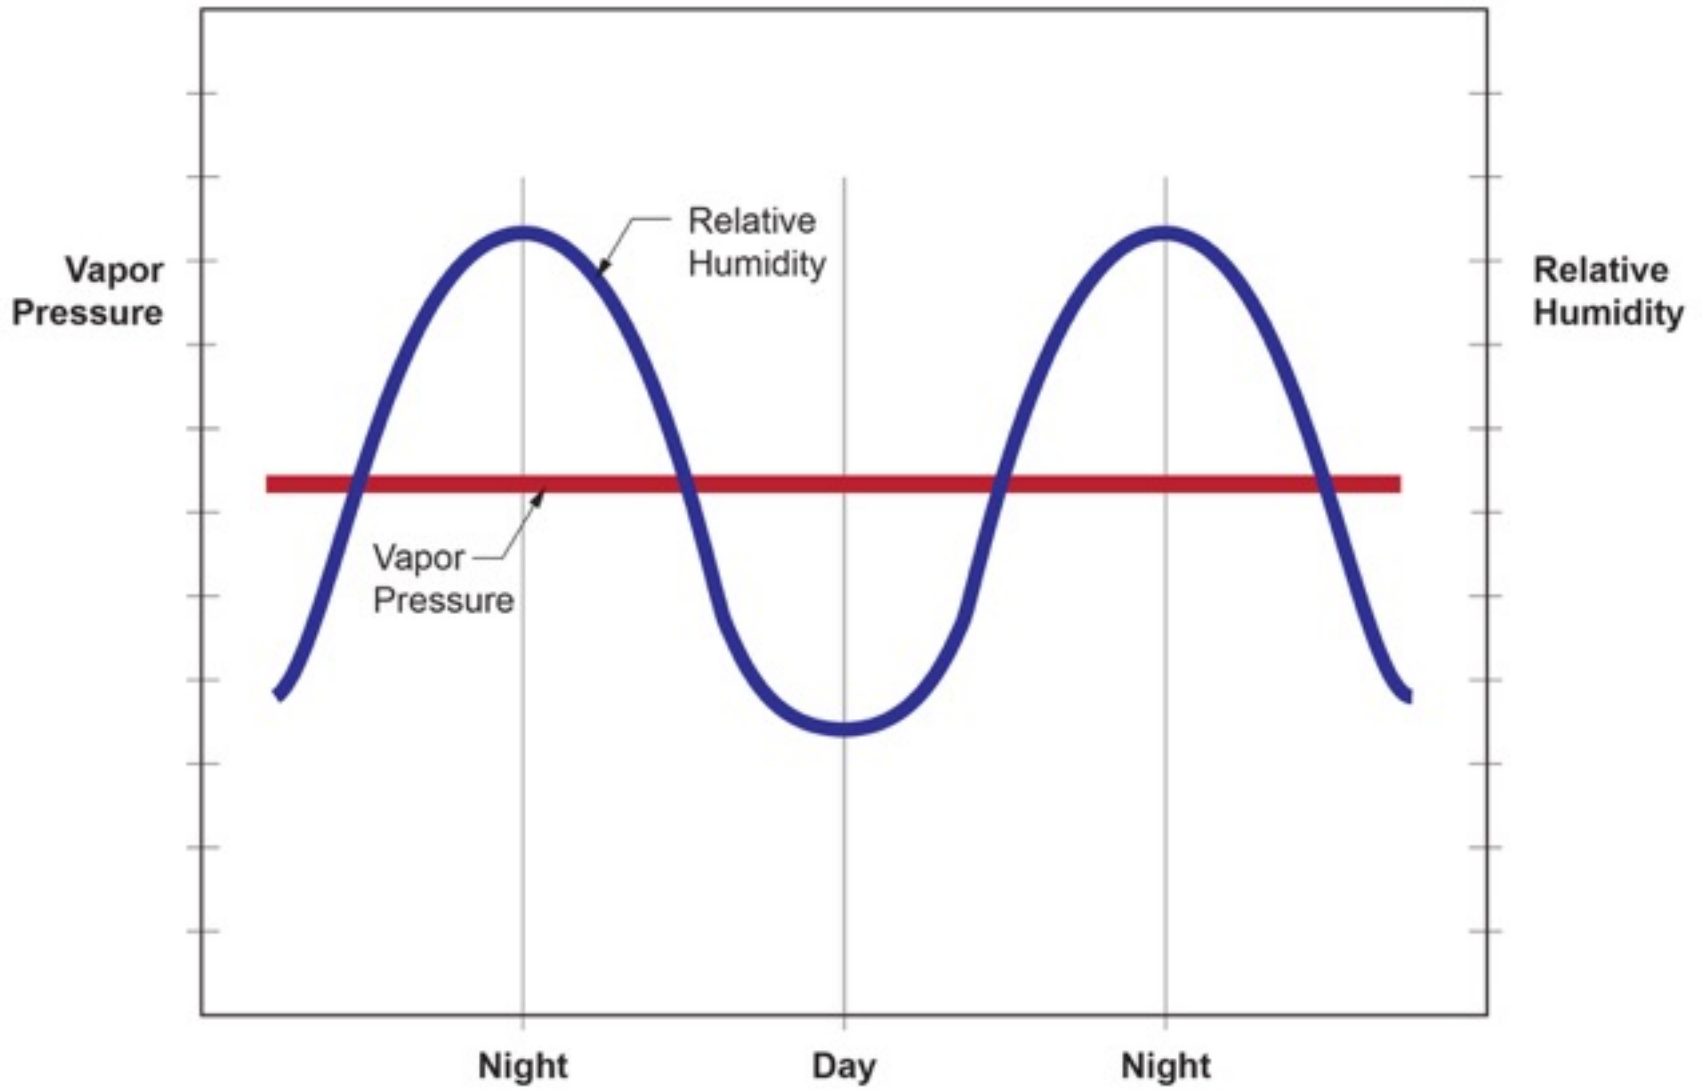

Extreme		Over 60"
High		40" - 60"
Moderate		20" - 40"
Low		Under 20"

# Conditioned Attics Not Unvented Attics

# Conditioned Attics Not Unvented Attics Need Supply Air

Conditioned Attics Not Unvented Attics  
Need Supply Air  
50 cfm/1000 ft<sup>2</sup> of Attic

FRF Data: June 1 - September 30, 1989

## Vented vs. unvented shingle temperatures

## Average Temperatures Vented and Unvented Attics, Aug-97

# Hourly Maximim Roof Deck Temperature

## LV24 and LV22

# Roof Shingle Temperature

FSEC 3.0: Orlando, 1-Aug

# Bottom of Roof Plywood Temperature

FSEC 3.0: Orlando, 1-Aug

**Step 1**

- Remove strip of OSB from each side of ridge

**Step 2**

- Create air seal with strip of vapor open membrane (tape seams)
- Vapor open membrane sheet sealed to OSB with acrylic caulk sealant
- Hold vapor open membrane sheet in place with metal strapping

**Step 3**

- Construct wood ridge vent with 2x2 furring

# Burying Ducts

Classic vented attic

Unvented attic with vapor diffusion port

# Where It Started

Note: Colored shading depicts the building's thermal barrier and pressure boundary. The thermal barrier and pressure boundary enclose the conditioned space.
