BUILDINGSCIENCE.COM SET TO EXPAND

Industry Partners Join Building Science Corporation to Support Free Resource

BOSTON – January 2013 Building science geeks from across North America will be excited to learn that buildingscience.com, a premier provider of free, objective information, is now poised to significantly expand. Readers should watch for new features and updated resources over the coming months, as well-known authors such as Joe Lstiburek and John Straube are joined by insider Industry Experts from some of the biggest companies in construction.

Building Science Corporation, the owners and managers of buildingscience.com, have partnered with a select group of companies to expand and improve the site. According to Alex Lukachko, BSC General Manager, “this process is really just an extension and formalization of long-standing partnerships we have already built. Throughout its 20-year history, BSC has worked with a wide array of businesses, organizations, and government agencies to create and disseminate high-quality information to the building and construction community.”

Each new Partner has named a technical expert from within its staff to act as a buildingscience.com Industry Expert. These experts will contribute to the site in a new section called Conversations, where critical building science issues will be discussed and debated, and will also have opportunities to add commentary to articles and reports posted on the site. By contributing new voices, perspectives, and specialized knowledge, Industry Experts will add depth to buildingscience.com’s coverage of the science behind good construction practices. BSC authors will also be showcased through the development of additional new resources and features.

Current Partners and Industry Experts are: BASF Center for Building Excellence (Rick Davenport), Dow Building Solutions (Gary Parsons), DuPont Building Innovations (Theresa Weston), ROXUL Inc. (Rockford Boyer), and Masco Home Services (David Bell).

buildingscience.com is a project of Building Science Corporation, a U.S. and Canadian building science consulting and full service architecture firm with clients throughout North America. Building Science Corporation specializes in building technology consulting for all types of buildings including commercial, institutional and residential. Its focus is preventing and resolving problems related to building design, construction and operation. BSC is internationally recognized for its work on moisture dynamics, indoor air quality, and building failure forensic investigations.
